

## ACKNOWLEDGMENTS

This study could not have been completed without the cooperation of the North Carolina Division of Marine Fisheries, and M. Marshal. We are also indebted to R. Herbert for assistance in the field and to C.H. Peterson for assistance and advice in all aspects of the study. Other people who aided in the field and laboratory work include M. Camara, A. Chua, J. Clug, J. Cuthrell, D. Shivers, and S. Sutherland. M. Kingston kindly identified the algae and W. Kirby-Smith (Director, Natural History Resource Center, Duke University Marine Laboratory) provided the continuous water temperature data at the DUML dock. K. West and J. Gillikin, Jr. facilitated our access to the NCDMF fisheries data base. Comments by V.S. Kennedy greatly improved the manuscript. Financial support was provided by grants from the North Carolina Division of Marine Fisheries, and from the United States Environmental Protection Agency and the North Carolina Department of Environment, Health, and Natural Resources, through the Albemarle-Pamlico Estuarine Study.
